

Stratton Farms

Church farm, Stratton on the Fosse, Radstock, Somerset, BA3 4QU

Stratton farms has hosted many visits over the years for local school children, wildlife groups, farmers groups and they have now joined up with us to deliver educational tours for schools.

Its well worth a visit to see their cows and sheep but also learn about how much arable work goes on here. It's a great place to go to cover curriculum areas of: planting and growing, life cycles, living things and their habitats, soils and more.

Over 20 acres of trees and 2,000 metres of new hedges have been planted in recent years and an ancient orchard has also been restored.

They grow Winter wheat (feed and milling), winter barley, spring barley, oilseed rape and spring beans are grown in the rotation. Other break crops grown include lupins, linseed, canary seed and red clover leys.

Working hard to be sustainable the Rainwater is harvested and used for a variety of uses including drinking water for cattle and for filling the sprayer. Two solar installations on the rooves of farm buildings supply electricity to the farming business and also help to run the grain drier at harvest. Another renewable project has been a biomass boiler running off woodchip which provides energy for three houses
